1 Main Results as Marginal Predictions

Predicted values of political engagement
by individual educational degrees and (de-)stratifying policies
based on within-component of cross-level interaction

Figure A1: Predicted Values of Political Engagement by Educational Degrees with 90% CIs

Predicted values of political engagement
by individual occupational qualification and (de-)stratifying policies
based on within-component of cross-level interaction

Figure A2: Predicted Values of Political Engagement by Occupational Qualification with 90% CIs

2 Descriptives

2.1 Descriptives Education Policies

Figure A3: Over Time and Between Federal States Variation of Education Policies: Binary Stratification Index

Figure A4: Over Time and Between Federal States Variation of Education Policies: Index Part 1

(De-)stratifying education policies in the German Länder,
 school years 1949/50-2009/10
 Comprehensive School Form

Figure A5: Over Time and Between Federal States Variation of Education Policies: Index Part 2

Figure A6: Over Time and Between Federal States Variation of Education Policies: Index Part 3

2.2 Descriptives Individual-Level Allbus Data

2.2.1 Descriptives Main Independent Variables

Figure A7: Univariate Distribution of the Main Independent Variables

2.2.2 Descriptives Dependent Variables

	count	mean	sd	min	max
Participation Index	5293	0.33	0.17	0	1
Political Interest	20031	0.54	0.25	0	1
Political Efficacy Index	5120	0.48	0.19	0	1
Observations	20031				

Table A1: Summary Statistics of the Main Dependent Variables

	count	mean	sd	min	max
Conventional Participation Index	5293	0.29	0.16	0	1
Participated in election	5293	0.86	0.35	0	1
Worked in party	5293	0.06	0.24	0	1
Protest voted	5293	0.17	0.38	0	1
Abstained out of protest	5293	0.08	0.27	0	1
Observations	5293				

Table A2: Summary Statistics of the Additional Dependent Variables: Conventional Political Participation

	count	mean	sd	min	max
Unconventional Participation Index	5293	0.36	0.23	0	1
Told friends opinion	5293	0.80	0.40	0	1
Participated public discussion	5293	0.33	0.47	0	1
Participated citizen initiative	5293	0.12	0.33	0	1
Participated unlawful demonstration	5293	0.05	0.21	0	1
Participated lawful demonstration	5293	0.29	0.45	0	1
Signed petition	5293	0.59	0.49	0	1
Observations	5293				

Table A3: Summary Statistics of the Additional Dependent Variables: Unconventional Political Participation

	count	mean	sd	min	max
Internal Political Efficacy Index	5214	0.54	0.25	0	1
Can assume active role in pol group	5249	0.40	0.32	0	1
Politics is too complex (higher values = disagree)	5271	0.59	0.31	0	1
Have little political knowledge (higher values = disagree)	5279	0.63	0.30	0	1
Observations	5294				

Table A4: Summary Statistics of the Additional Dependent Variables: Internal Efficacy

	count	mean	sd	min	max
External Political Efficacy Index	5180	0.38	0.23	0	1
Politicians don't care about people like me (higher values = disagree)	5231	0.31	0.28	0	1
Politicians try to represent interests of people	5232	0.44	0.26	0	1
Observations	5283				

Table A5: Summary Statistics of the Additional Dependent Variables: External Efficacy

3 Robutness Checks

3.1 Alternative Measurement Strategies

3.1.1 Main Results with Sub-Indices

Main Effects of de-stratifying education policies on political engagement

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A8: Main Effects with Sub-Indices

Cross-level interaction: (within) effects of de-stratifying education policies on political engagement among different educational groups

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls. Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A9: Moderation Effects with Participation Sub-Indices

Cross-level interaction: effects of de-stratifying education policies on political engagement among different educational groups

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A10: Moderation Effects with Efficacy Sub-Indices

3.1.2 Main Results with Single Variables

Robustness check: Single variables: Conventional participation
 Main Effects of de-stratifying education policies on political engagement

For each dependent variable positive coefficients show increased participation
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A11: Main Effects of Single Variables: Conventional Participation

Robustness check: Single variables: Unconventional participation

Main Effects of de-stratifying education policies on political engagement

For each dependent variable positive coefficients show increased participation.
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A12: Main Effects of Single Variables: Unconventional Participation

Robustness check: Single variables: Internal efficacy
 Main Effects of de-stratifying education policies on political engagement

For each dependent variable positive coefficients show increased efficacy.
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A13: Main Effects of Single Variables: Internal Efficacy

Robustness check: Single variables: External efficacy
 Main Effects of de-stratifying education policies on political engagement

For each dependent variable positive coefficients show increased efficacy.
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A14: Main Effects of Single Variables: External Efficacy

Robustness check: Single variables: Conventional participation
 Cross-level interaction: effects of de-stratifying education policies (within effects)
 on political engagement among different educational groups

For each dependent variable positive coefficients show increased participation
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A15: Moderation Effects of Single Variables: Conventional Participation

Robustness check: Single variables: Unconventional participation

Cross-level interaction: effects of de-stratifying education policies (within effects)
on political engagement among different educational groups

For each dependent variable positive coefficients show increased participation
Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A16: Moderation Effects of Single Variables: Unconventional Participation

Robustness check: Single variables: Internal efficacy

Cross-level interaction: effects of de-stratifying education policies (within effects) on political engagement among different educational groups

For each dependent variable positive coefficients show increased efficacy
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A17: Moderation Effects of Single Variables: Internal Efficacy

Robustness check: Single variables: External efficacy
 Cross-level interaction: effects of de-stratifying education policies (within effects)
 on political engagement among different educational groups

For each dependent variable positive coefficients show increased efficacy
 Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A18: Moderation Effects of Single Variables: External Efficacy

3.1.3 Main Results with Single Policy Indicators and Binary Destratification Index

Main Effects of single de-stratifying education policies on political engagement

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls. Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A19: Main Effects of Single Policy Indicators

Cross-level interaction: effects of single de-stratifying education policies (within effects) on political engagement among different educational groups

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls. Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A20: Moderation Effects of Single Policy Indicators

3.1.4 Main Results (Moderation) with additional societal groups

Cross-level interaction: effects of de-stratifying education policies on political engagement among different societal groups

Models include age, age², gender and German nationality as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)
 Models for social class also include parents' educational and occupational qualification as individual-level controls

Figure A21: Moderation Effects with additional societal groups

3.2 Alternative Modelling Strategies

3.2.1 Main Results with Alternative Modelling Strategies

Main Effects of single de-stratifying education policies on political engagement
Different Modelling Strategies

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls. Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A22: Main effects: alternative modelling strategies

Cross-level interaction: effects of single de-stratifying education policies (within effects)
on political engagement among different educational groups

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls. Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A23: Cross-level interaction: alternative modelling strategies

3.2.2 Main Results for those in full-time employment

Main Effects of de-stratifying education policies on political engagement
 Subsample: Full-Time Employees

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A24: Main Effects in Reduced Sample (full-time employment)

Cross-level interaction: effects of de-stratifying education policies
on political engagement among different educational groups
Subsample: Full-Time Employees

Models include age, age², gender, German nationality, and parents' educational and occupational qualification as individual-level controls
Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A25: Cross-level interactions in reduced sample (full-time employment)

3.2.3 Cross-Level Interactions Controlling for Confounders and Mediators

Cross-level interaction with respondents' educational degrees with multiple confounding and mediating variables

Models include age, age², gender and German nationality as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A26: Effects of respondents' educational degrees including additional confounders and mediators

Cross-level interaction with respondents' occupational qualification with multiple confounding and mediating variables

Models include age, age², gender and German nationality as individual-level controls
 Models also control for wave and school cohort fixed effects and unemployment and left cabinet power (measured at the time of the educational policies)

Figure A27: Effects of respondents' occupational qualification including additional confounders and mediators
